                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a composition containing a vector comprising a CC gene encoding a regulatory transcription factor under the control of a CC promoter encoding a transforming growth factor-beta (TGF-beta). The CC vector is useful for expressing TGF-beta, such as TGF-beta). The CC vector is useful for expressing TGF-beta, such as TGF-betal, TGF-beta (TGF-beta) is part of a host suspected of having an autoimmune disease, especially inflammatory bowel disease (IBD), under conditions such that the CC expressed. The vector is delivered using a delivery system. The delivery of the vector results in substantial elimination of symptoms of the composition is useful for treating various diseases with an autoimmune CC component such as multiple solerosis, rheumatoid arthritis, systemic CC lupus erythematosus, insulin-dependent diabetes mellitus, sarcoidosis and psoriasis, and also for assaying the expression of a gene in a cell. CC compounds on cytokine (e.g. TGF-beta) expression of transfected cells. The present sequence is a cDNA encoding porcine TGF-betal mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                        It was obtained by an analysis of several overlapping cDNAs and gene fragments, leading to the detn. of a continuous sequence corresp. to tTGF-beta-1 precursor mRNA. It is useful in constructing vectors that encode biologically active transforming growth factor (TGF-beta), or a nucleic acid capable of hybridising with it, can also be labelled and used in diagnostic assays for DNA or mRNA encoding TGF-beta or related

                                                                                                                       Query Match
                                                                                                                                                                   Sequence encodes the 390 amino acid (AA) precursor transforming growth factor-beta 1 (pre-TGF-beta 1) polypeptide. The 5' untranslated region of the TGF-beta 1 mRNA is 841 bases long, is purine rich and has a region of potential secondary structure. The TATA-like sequence in the 3' untranslated region of the gene is presumably a polyadenylation signal. Mature TGF-beta 1 comprises the C-terminal 112 AA's of pre-TGF-beta 1 and is cleaved at the Arg-Arg dipeptide preceding its NH2 terminus. The nucleic acid encoding the second subtype of TGF-beta (TGF-beta) is useful as a probe or to produce TGF-beta 3 for inhibition of growth of normal and neoplastic cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GC_signal

                                                                                                                                                                                                                                                                                                                                                                                                                                     1077
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1017
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The cDNA encodes the pre-transforming growth factor (TGF) beta 1 protein. The nucleotide sequence was obtd. by an analysis of several overlapping cDNAs and gene fragments. The DNA is useful for the recombinant production of TGF beta 1, which can be used in, e.g. wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New recombinant human transforming growth factor-beta prods. - produc using Chinese hamster ovary cells, for use in diagnostic applications or in therapy

TGF-beta exon (see AAV52936) restriction fragments as probes.

The 3' region of the sequence was determined using cloned genomic DNA. The invention relates to the recombinant production of TGF-beta. Biologically active TGF-beta is defined as being capable of inducing EGF-potentiated anchorage independent growth of target cell lines and/or growth inhibition of neoplastic cell lines. Nucleic acids encoding TGF-beta have been isolated and cloned into vectors which are replicated in bacteria and expressed in eukaryotic cells. TGF-beta recovered from transformed cells is used in known therapeutic applications. TGF-beta nucleic acids are also useful in diagnosts and expresses acids are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          04-AUG-1989;

                                                                                                                                                                                          This nucleotide sequence codes for the human transforming growth factor-beta 1 precursor (preTGF-beta 1, see AAW78785). It is a composite of overlapping cDNA clones isolated from different cDNA libraries (placenta, Al72 glioblastoma, HT1080 fibroblastoma) using

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                     in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathles and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                         specification
                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the immunosuppressant and cytostatic activity. The polynucleotides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            such as central nervous system injuries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2001-442253/47.

The specification describes a pharmaceutical composition, comprising CC a growth factor, an inhibitor agent, i.e. a protease. The inhibitor agent inhibits the action of at least one specific adverse protein, CC i.e. a protease, that is upregulated in a damaged tissue such as a CC wound environment. Growth factors which are included in the composition of the invention are platelet-derived growth factor (PGF), fibroblast CC growth factor (FGF), connective tissue derived growth factor (CTGF), CC keratinocyte-derived growth factor (KGF), transforming growth factor (GM-CSF), epidermal growth factor (KGF), transforming growth factor (GM-CSF), and chrysalin. Inhibitors which are included in the CC composition of the invention include inhibitors of urokinase-type plasminogen activator (UPA) and matrix metalloproteinase (MMP). The CC composition is useful for the treatment of chronic damaged tissue, i.e. wounds and dermal ulcers. The present sequence encodes a human TGF-beta, and is used to produce the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
